

# 29 Jan' 23 Assignment

1. What is position property in CSS and its types ?

Ans- Position property defines where to place the particular piece of content. Types of position property are:

- a. Static
- b. Sticky
- c. Fixed
- d. Relative
- e. Absolute

We also have to define top,bottom,left or right along with these properties.

2. How many types of positioning are there in CSS ?

Ans- There are 5 types of positioning in CSS -

- a. Static
- b. Sticky
- c. Fixed
- d. Relative
- e. Absolute

3. What is Z-index and why to use it?

Ans - Z-index is used to define the stack order of an element. The higher the z-index,the higher the priority to be displayed on top.
