

Walkthrough with React

Assignment

Problem statement

1. Create a component named "Person" that takes two props - "name" and "age". The component should display the person's name and age in a paragraph element.
2. Create a component named "Button" that takes two props - "text" and "onClick". The component should display a button element with the given text and call the onClick function when clicked.
3. Create a component named "Header" that takes one prop - "title". The component should display a header element with the given title.
4. Create a component named "List" that takes one prop - "items". The component should display an unordered list element with the given list items.
