

28' Jan 23 Assignment

1. What are media queries in CSS and their use case ?

Ans- In today's world of internet the number of people browsing on the internet has increased dramatically and all of them have a variety of devices of different sizes so our website should be responsive to all these sizes, this is where the Media Queries come into picture.

We can use it to write different CSS for different sizes so that the user experience of the website is good for all users with different types of devices.

2. Difference between min-width and max-width in media queries in CSS.

Ans- Min-width is the minimum width above which the media query will be applied whereas the max-width is the maximum width up to which the media will be applied.

3. Explain float property and clear property in CSS with examples.

Ans- Float property is used to describe the flow of the content will be displayed on the webpage.

float : none; is the default in which the content will be displayed on the webpage.

float: right; displays the content from right hand side

float : left displays the content from left hand side

Clear property -

The clear CSS property sets whether an element must be moved below (cleared) floating elements that precede it. The clear property applies to floating and non-floating elements.
