

Internal CSS

Internal CSS

- The internal CSS is used to add a unique style for a single document.
- It is defined in `<head>` section of the HTML page inside the `<style>` tag.

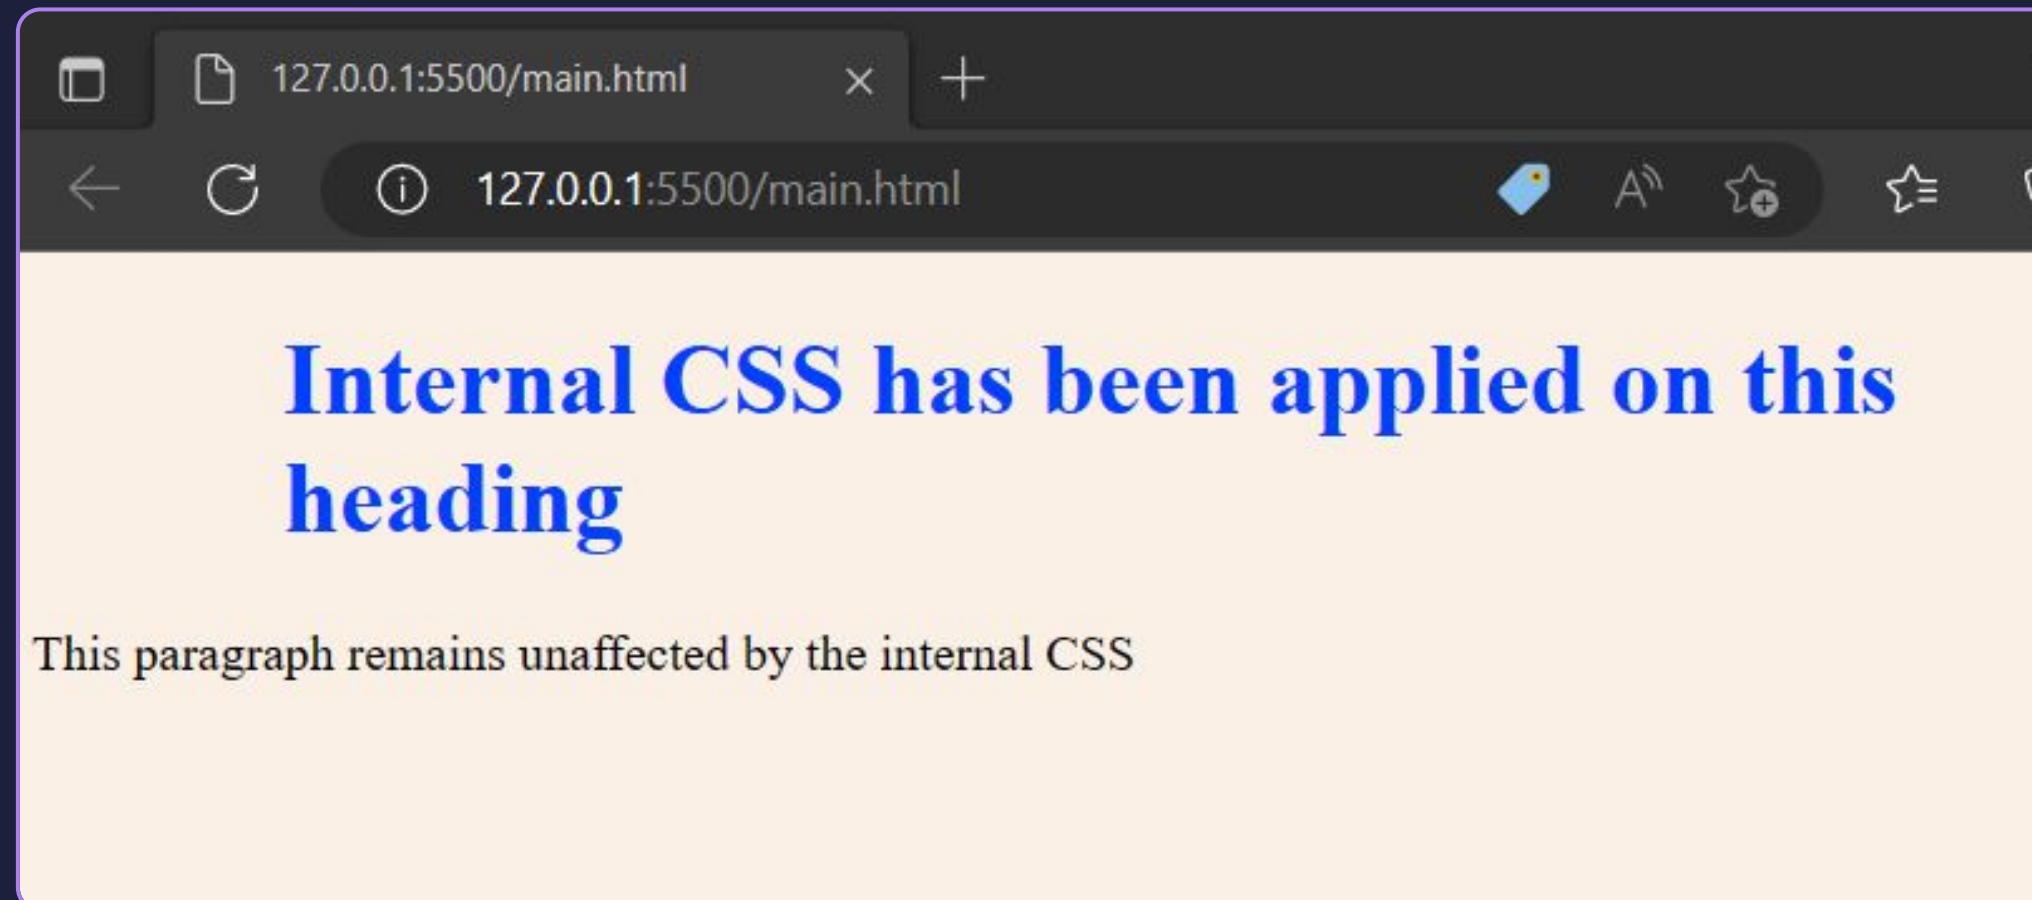

Advantages of Internal CSS:

- IDs and classes can be used in internal style sheets.
- You do not need to upload numerous files.
- They might take precedence over outside style sheets.

Disadvantages of Internal CSS:

- They are useful for only the page they are specified on.
- Internal style sheets increase page load times.
