26'Jan 2023 More With CSS Assignment

1. What is padding and margin and when do you use them ?

Ans - Padding is the space around the content and margin is the space around the border.
We can use padding and margin for formatting the text, making the text look good, specifying a particular space for the text, we can use it to make some text differently visible on the webpage, etc.

2. What is display property and explain display inline, block, and inline-block ?

Ans- Display property is the property which can change the nature of the elements from inline to block and vice versa and much more.

Display inline :
It changes the nature of the element to the nature of Inline elements

Display block :
It changes the nature of the element to the nature of block elements

Display inline-block :
It gives us the control to change the height and width of the content written inside it.

3. Explain min-height, min-width, max-height, and max-width in CSS.

Ans-

min-height: It sets a minimum height for the content to be written in, height can increase if the content is larger than the entered height.

max-height : It sets a maximum height for the content to be written in, height is reduced if the content is smaller than the entered height.

min-width: It sets a minimum width for the content to be written in, width can increase if the content is larger than the entered width.

max-height : It sets a maximum width for the content to be written in, width is reduced if the content is smaller than the entered width.
